SUMMARY

With approximately 3 years of experience in ReactJS technologies, I am a front-end developer seeking a professional, dynamic, and challenging environment to unleash my potential, enhance my practical knowledge, and further enrich my professional expertise.

Driven by a passion for continuous learning, I enthusiastically embrace new languages and technologies. Valued as a collaborative team member, I actively support and assist others, while also taking on mentoring responsibilities and conducting thorough code reviews for fellow team members.

TECHNICAL SKILLS

- Programming Languages: JavaScript, HTML, CSS, Java,... very good at JavaScript, HTML, CSS.
- Frameworks and Libraries: AngularJS, ReactJS, Nodejs, SCSS, NextJs…
- Version Control: SVN, Git, Gitlab, Bitbucket.
- Experienced in debugging, fixing issues and developing software.
- Experienced implement responsive web app support for all devices, web accessibility.
- Skilled in leading teams, overseeing tasks and resolving issues, collaborating with cross-functional teams including QA, PM, and UI/UX, and adept at negotiating to align with customer requirements and define project concepts.
- Possessing strong proficiency in algorithm implementation, adept at integrating new features, enhancing existing functionalities, and successfully implementing complex software modules based on intricate algorithms.

EDUCATION

University of Engineering and Technology (UET - VNU)   **From 08/2017 to 06/2021**
- Studying Information Technology
- Degree grade: Very Good – GPA 3.28/4

PROFESSIONAL EXPERIENCE

FPT Software   **12/2022 - Now**
Project: Customer Relationship Management rebuild (CRM)
- **Project Description**: A system which helps businesses store, analyze and report all customer information, interaction history, transaction history, access history to help businesses fully connect with customers, standardize all business processes, increase work efficiency and improve revenue.
- **Team Size:** 20

- **Technology Used:** TypeScript, NextJS, Redux-toolkit, ReactJS, Antd,…
- **Responsibilities:**
Optimize web content for optimal speed and performance.
Enhancing web performance when handling extensive data sets by optimizing the processing and display capabilities for improved efficiency.
Leading teams of five members, overseeing tasks, resolving issues, and collaborating with cross-functional teams (QA, PM, Comtor, Tester, etc.) to achieve project success.

VNTRAVEL Tourism Joint Stock Company   **07/2020 - 12/2022**
Position: Front-end Developer
Project: Hotel Management Service (HMS)
- **Project Description**: A system that helps manage the supply of accommodation from all other systems of the company, thereby helping businesses optimize revenue in the accommodation segment.
- **Team Size:** 9
- **Technology Used:** TypeScript, ReactJS, Redux-toolkit, Material-UI,…
- **Responsibilities:**
Theming and Theme Switching with Material-UI and styled-components.
Developing reusable common components within the system to promote code reusability and facilitate efficient and consistent implementation across various functionalities.
Constructing a module utilizing drag and drop functionality in scheduled calendar formats to efficiently manage hotel room rates, while optimizing performance through the implementation of react-virtualized and react-window.

Project: Chat Portal
- **Project Description**: A system which helps to manage chat operations, handle incoming tickets from many different systems of the business, help users to deal directly with customers, thereby helping to optimize work efficiency for customer support teams.
- **Team Size:** 8
- **Technology Used:** TypeScript, ReactJS, Redux-toolkit, Material-UI,…
- **Responsibilities:**
Creating ticket management modules that incorporate submit forms using react-hook-form, enabling streamlined and efficient ticket handling processes.
Upgrading and maintaining the chat socket module to ensure its continuous functionality, reliability, and optimal performance.

Project: API Management Service (AMS)
- **Project Description**: A system which serves as a gateway, checks the authentication and authorization of the users from other corporate applications.
- **Team Size:** 4
- **Technology Used:** JavaScript, ReactJS, Redux-toolkit, Material-UI, …
- **Responsibilities:**
Developing data tables for effective management of API endpoints, implementing formik forms for testing email and SMS sending, and optimizing the display of table data to enhance data visualization and user experience.
Creating key technical documentation and mentoring new team members for seamless knowledge transfer and professional development.

PASTIMES AND ACTIVITIES

- In my leisure time, I have a strong passion for reading books, exploring IT blogs, and engaging with platforms like Medium and Quora. Some of my favorite books include "Clean Code," "The Pragmatic Programmer," and "JavaScript Data Structures and Algorithms." These resources fuel my continuous learning and keep me up-to-date with the latest developments in the field of technology.
